

**Amendments to the Specification:**

Please replace the paragraph [0025], with the following amended paragraph:

-- The clutch housing 5 has a drive-side housing wall 33, which proceeds essentially in the radially outward direction from the drive-side housing hub 19, and a takeoff-side housing wall 35, which proceeds essentially in the radially outward direction from the takeoff-side housing hub 23. In the radially outer area of the takeoff-side housing wall 35, there is a housing outer shell 37, which connects the two housing walls ~~30~~ 33, 35 to each other axially. This outer shell is attached by way of an abutment 39 for a bridging clutch 41, to be described in greater detail below, to the drive-side housing wall 33. --
